

NOLAN YOUNG

FULL-STACK SOFTWARE DEVELOPER | WEB PLATFORMS | AUTOMATION | AI INTEGRATION

Queensbury, NY | 518-681-1835 | nolanyoung7@yahoo.com | github.com/nolanyoungg | shibey.com

PROFESSIONAL SUMMARY

Developer who connects software engineering with real business needs. Serving as a technical partner to engineering, operations, marketing, sales, and leadership by translating business priorities into well-defined, achievable software initiatives. Skilled at navigating ambiguity, reconciling competing requirements, explaining technical tradeoffs, and maintaining alignment from initial planning through production release. Brings together hands-on engineering, cross-functional collaboration, and long-term thinking to deliver solutions that people can understand, trust, and use effectively.

TECHNICAL EXPERTISE

Languages: PHP, JavaScript, TypeScript, Python, C#, C++, Java, SQL, HTML5, CSS3/SCSS, PowerShell, Bash

Frameworks & Libraries: Node.js, React, .NET, WPF, Flask, Laravel, jQuery, Bootstrap, REST APIs, OAuth 2.0, webhooks, Power Automate, Zapier, object-oriented programming, asynchronous programming

Website Technologies: WordPress, WooCommerce, custom themes and plugins, Advanced Custom Fields (ACF), Gravity Forms, Gutenberg, Algolia

Data Storage: MySQL, Microsoft SQL Server, MongoDB, Microsoft Access

DevOps & Delivery: Git, GitHub, GitHub Actions, CI/CD, npm, Gulp, Webpack, Linux, SSH/SFTP, Pressable, LocalWP, release validation

Analytics: Google Analytics 4 (GA4), Google Tag Manager (GTM), Google Search Console, UTM attribution, technical SEO

IT Infrastructure: Windows Server, Active Directory, Microsoft Intune, Microsoft Entra ID, endpoint administration, identity and access management, network security

AI: Codex, Ollama, LM Studio, Qwen Coder, OpenAI-compatible APIs, local model integration, prompt engineering

PROFESSIONAL EXPERIENCE

FULL-STACK SOFTWARE DEVELOPER & IT DIRECTOR

February 2024–Present

Grasshopper Gardens | Gansevoort, NY

- Own the full software-development lifecycle for the company's lead-generation and eCommerce platforms, designing and delivering applications, features, integrations, and automation with PHP, JavaScript/TypeScript, Python, Node.js, SQL, WordPress, WooCommerce, and third-party APIs.
- Led the transition from outside-agency support to complete in-house technical ownership, establishing direct control over application code, hosting, deployments, security, vendor access, and technical planning.
- Re-engineered customer journeys, lead-generation systems, and checkout experiences across two production platforms, helping support a 60% increase in leads and \$7.5M+ in added revenue.
- Architect integration and automation layers connecting eCommerce, inventory, customer, referral, analytics, and reporting systems, contributing to 90% fewer synchronization errors and more reliable data exchange.
- Develop complex commerce capabilities spanning catalogs, product variations, search, pricing, inventory, shipping, payments, checkout validation, order processing, and customer communications.
- Build reusable reporting and workflow automation with authenticated APIs, scheduled execution, structured transformation, input validation, exception handling, logging, and automated delivery.
- Modernize analytics and attribution across GA4, Google Tag Manager, Google Ads, Search Console, WooCommerce, and customer forms while establishing Git-based release practices, staging, validation, backups, and recovery procedures.
- Lead cross-stack production troubleshooting and translate business requirements into technical specifications, development plans, acceptance criteria, and maintainable solutions for leadership, marketing, sales, eCommerce, and operations.
- Evaluate and implement AI-assisted development and local coding models to accelerate architecture, implementation, debugging, review, documentation, and repetitive engineering workflows under direct human validation.
- Administer 150+ endpoints through Active Directory, Group Policy, Microsoft Intune, Entra ID, and Windows Server, managing identity, access, deployment, patching, network security, and support associated with 99.9% uptime.

SELECTED TECHNICAL PROJECTS

NOLAN YOUNG AI-ASSISTED GITHUB DEVELOPMENT

Independent | Active

Technologies: Codex, Ollama, LM Studio, Qwen Coder, GitHub Actions, Node.js, TypeScript, Python, PowerShell, Bash

- Develop and maintain software projects through a hybrid workflow combining cloud engineering agents, locally hosted coding models, deterministic automation, source control, and direct human review.
- Build staged orchestration scripts for context collection, generation, review, validation, preview creation, packaging, and reporting; connect local models through OpenAI-compatible HTTP interfaces without coupling projects to one provider.
- Use builds, compiler output, tests, browser-console evidence, validation reports, and repository diffs to verify AI-assisted changes before acceptance into documented, reproducible GitHub workflows.

WOOCOMMERCE & ALGOLIA COMMERCE PLATFORM ENGINEERING

Grasshopper Gardens | Production

Technologies: PHP, JavaScript, WooCommerce APIs, WordPress Hooks, Algolia, InstantSearch.js, JSON, SSH/SFTP

- Re-engineered product indexing and search rendering to source authoritative WooCommerce variation pricing, formatted price output, availability, and shipping data instead of stale parent-product metadata.
- Added product and variation lifecycle hooks that keep Algolia records synchronized with catalog updates and bulk imports while preserving safe renderer fallbacks for legacy records.
- Implemented variation-aware local-delivery, nationwide-shipping, UPS, pickup, and checkout-validation logic and resolved indexing, shortcode, deprecation, rendering, and HTTP 500 failures.

BUSINESS REPORTING & INTEGRATION AUTOMATION

Grasshopper Gardens | Production

Technologies: Python, REST APIs, OAuth 2.0, JSON, CSV, Power Automate, Zapier, SOS Inventory, Service Autopilot

- Built authenticated integrations with OAuth 2.0, offset-based pagination, total-count verification, record filtering, field normalization, defensive data handling, and structured error reporting.
- Developed scheduled weekly and monthly reporting workflows with date-aware messaging, validated CSV output, automated distribution, and reusable patterns for authentication, transformation, logging, and delivery.

ECOMMERCE ANALYTICS & EVENT-TRACKING PIPELINE

Grasshopper Gardens | Production

Technologies: JavaScript, Google Tag Manager, GA4, WooCommerce, dataLayer, Google Ads, Search Console

- Re-engineered add-to-cart measurement to emit structured eCommerce events only after successful WooCommerce cart updates, accounting for both redirect-based and AJAX behavior.
- Designed dataLayer events and GTM mappings for product and variation data, removed duplicate measurement paths, and expanded form attribution through persistent UTM capture.

CUSTOM WORDPRESS THEME FRAMEWORK & BUILD PIPELINE

Independent and Production Development

Technologies: PHP, JavaScript, SCSS, ACF, Gutenberg, Gulp, Webpack, npm, Composer, GitHub Actions

- Designed modular classic WordPress theme architectures with Gutenberg compatibility, reusable templates, ACF-driven content, scalable SCSS, and clear separation among application, presentation, assets, and tooling.
- Created automated build and packaging workflows for SCSS compilation, JavaScript bundling, linting, structural validation, asset verification, package inspection, preview deployment, and upload-ready WordPress ZIP artifacts.

ADDITIONAL EXPERIENCE

PROJECT MANAGER

June 2017–Present

Young’s Home Improvement | Queensbury, NY

- Lead residential and commercial projects through scoping, budgeting, permitting, scheduling, subcontractor coordination, quality assurance, and final delivery.
- Manage client communication, change orders, field issues, safety requirements, and coordination across multiple trades.

LANDSCAPE ENGINEER

November 2023–February 2024

Grasshopper Gardens | Gansevoort, NY

- Produced 3D landscape models, technical proposals, material takeoffs, and cost estimates for residential and commercial projects before transitioning into software development and IT leadership.

EDUCATION

COMPUTER SCIENCE, A.S.

September 2022–May 2024

SUNY Adirondack | Queensbury, NY

Relevant coursework: Data Structures and Objects in C++, Computer Systems, Calculus I and II, Linear Algebra, and Discrete Mathematics.
